MATH302: Individual assignments for Analysis Assignment 2

The assignments of examples from Euler's text for each individual are given here. The numbers of the examples are given in Roman numerals, as in Euler's text, together with the page numbers in the text (not the page numbers of the .pdf file, which might vary in different browsers). Note that the numbering of examples does not determine them uniquely, because there are three different groups. *Will those who have been assigned I on pp61-2 please look at the note on the main Assignment Sheet 2.*
